

Stages Built Into NetRexx Pipelines 4.02 & CMS Pipelines V7R1 and Their Differences

How to Read Syntax Diagrams

Special diagrams (often called railroad tracks) are used to show the syntax of external interfaces.

To read a syntax diagram, follow the path of the line. Read from left to right and top to bottom.

- The ►►--- symbol indicates the beginning of the syntax diagram.
- The ---► symbol, at the end of a line, indicates that the syntax diagram is continued on the next line.
- The ►--- symbol, at the beginning of a line, indicates that the syntax diagram is continued from the previous line.
- The ---►◀ symbol indicates the end of the syntax diagram.

Within the syntax diagram, items on the line are required, items below the line are optional, and items above the line are defaults.

Pipelines Builtin Stages

Show Stages Implemented in:

NetRexx Pipelines: CMS Pipelines:

64decode
decode64
3.11

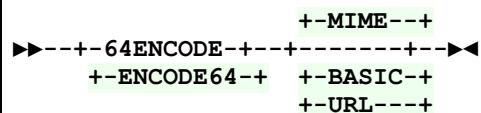

Decode Base-64 Format

- NOTE: CMS is only 64DECODE, and does not have the options; it does MIME.
- BASIC - Output is mapped to a set of characters lying in A-Za-z0-9+. The encoder does not add any line feed in output the decoder rejects any character other than A-Za-z0-9+.
- URL - Output is mapped to set of characters lying in A-Za-z0-9+_-. Output is URL and filename safe.
- MIME - Output is mapped to MIME friendly format. Output is represented in lines of no more than 76 characters each. It uses a carriage return '\r' followed by a linefeed '\n' as the line separator. No line separator is present to the end of the encoded output.
- 3.11: New to NetRexx. Add MIME, BASIC, & URL options.

64encode
encode64
3.11

Encode to Base-64 Format

- NOTE: CMS is only 64ENCODE, and does not have the options; it does MIME.
- BASIC - Output is mapped to a set of characters lying in A-Za-z0-9+. The encoder does not add any line feed in output the decoder rejects any character other than A-Za-z0-9+.
- URL - Output is mapped to set of characters lying in A-Za-z0-9+_-. Output is URL and filename safe.
- MIME - Output is mapped to MIME friendly format. Output is represented in lines of no more than 76 characters each. It uses a carriage return '\r' followed by a linefeed '\n' as the line separator. No line separator is present to the end of the encoded output.
- 3.11: New to NetRexx. Add MIME, BASIC, & URL options.

    +-+-----+delimitedString+-----+delimitedString+
  ►--+-----+-->
    | +-FOR- (1) +           |
    +-+-----+numorstar-+
  |
  changeString:
  |--delimiter--string--delimiter--string--delimiter--|
  |
  anycase:
  +-RESPECTCASE- (1) +
  |-----+--|
  +-ANYcase-----+
  +-CASEANY-----+
  +-CASEIGNORE-----+
  +-IGNORECASE-----+
  +-CASSLESS-----+
```

- (1) NetRexx Pipelines only.

changeparse
changepars
changepar
changepa
changege
3.11

Change the contents of records, using REXX Parse. Calculations can be done.

NetRexx

```
+--FROM--+          +-TO+  
►---CHANGEParse---+-----+parse_template_Dstring-----+output_template_Dstring-->  
►---+-----+-->  
    +-BY-by_NetRexx_Dstring-+  
  
►---+-----+-----+-----+-->  
    +-FIRST-first_NetRexx_Dstring-+  +-FINALLY-finally_template_Dstring-+
```

- Records are parsed via the parse_template_delimited_string.
- Variables are named \$n, where n is 1 to 9.
- The by_NetRexx_delimited_string is interpreted. This is 0 or more semicolon separated NetRexx statements, probably using the \$n variables, which can have the value altered.
- Other variables may be used, and are persistent while the stage is active, so can be used as accumulators.
- The values of the variables are put into the output_template_delimited_string replacing \$n.
- For a literal \$n that won't be changed, use \$\$n.
- A first_NetRexx_delimited_string, if present, is interpreted before reading any record from the primary input stream. or more semicolon separated NetRexx statements, probably using the \$n variables. Any variables used in the by_NetRexx_delimited string must be defined here.
- A finally_template_delimited_string, if present, is written as a final output record after the primary input stream is finished using the \$n's.
- Any keyword phrases must, in any order, follow any non-keyworded FROM & TO phrases.
- This is NetRexx Pipelines only, not in CMS.

Examples:

```
• changeparse / 2 $1 +1/ /The second letter is "$1". $$1 won't be changed./  
• changeparse from / 2 $1 +1/ to /The second letter is "$1". $$1 won't be changed./  
• changeparse from / . $2 . 50 $5 +5 / to /The product is $1/ by /$1 = $2 * $5/  
• changeparse from / . $2 . 50 $5 +5 / ,  
  to /The product is $1/ ,  
  by /$1 = $2 * $5;$3 = $3 + $1/ ,  
  first /$3 = 0/ ,  
  finally /$3 is the total/
```

changeregex
changerege
changereg
changere
changer
3.09

Substitute Contents of Records using Java Regular Expressions

NetRexx

```
+--FROM--+          +-TO+          +-ONE-+  
►---CHANGERegex---+-----+delimitedString-(1)-----+delimitedString-(2)-----+-->  
                                         +-ALL-+
```

- Uses the Java RegEx classes and its dialect of RegEx. See Java's **Pattern** class and **replaceFirst** and **replaceAll** of **String** for full documentation.
- (1) First, FROM, delimitedString is a Java *RegEx expression* for what is to be replaced.
- (2) Second, TO, delimitedString is the replacement string. It may contain elements from the first one.
- This is NetRexx Pipelines only, not in CMS.

chop
truncate
truncat
trunca
trunc

Truncate the Record

```
+--80-----+  
►---+---CHOP---+-----+-->  
    +-TRUNCate-+  +-snumber-----|  
    +-| stringtarget |---+  
  
stringtarget:

- DISPLAY works similar to and as a replacement for CONSOLE for output. But instead of going to the terminal window, it goes to a HTML file browser tab. This allows for HTML+CSS tags to control fonts, colors, and layout. This stage can be found in examples-pipes.
- To work, these are required outside Pipelines and NetRexx:
 - A working HTML browser program
 - The operating system to associate the filetype "html" with the browser, so the Pipelines stage "COMMAND PipeDisp.html" does call the browser and display the file.
 - The system have a Temp directory, known to Java.
- The DISPLAY stage overwrites the named file, by default PipeDisp.html, in the system Temp directory, then calls the COMMAND stage to display it. The file is not erased automatically by this stage.
- Each DISPLAY stage invocation opens a new browser tab, which remains open.
- The AS option causes the data to be surrounded by html tags.
 - The default TEXT or PRE puts on <pre> and </pre>. Most browsers use:
 - Fixed width font
 - Display all the white spaces: line feeds and multiple spaces
 - HTML uses <html> and </html>. Most browsers use:
 - Variable width font
 - Consolidate strings of white space into a single space
 - All the HTML tags
 - TABLE uses <table> and </table>
 - Expects the data records to begin with <tr><td> (or <tr><th>)
 - NOTAG uses <pre> & </pre>, but first converts all & characters to the entity & and < characters to < so HTML tags are not processed.
 - NONE uses no extra tags. Most browsers use:
 - HTML display
- OPTIONS QString is included in the opening tag for the AS option. This could be CLASS, STYLE, or other options.
- TITLE QString adds <title>delimitedString</title> to the beginning of the output. This should show as the title in the tab.

Note: This officially should go into a HEAD section; here it won't be there. Most modern browsers will honor it anyway if it is not honored as a tag, QString will be the top line of the display.
- STYLE QString adds <link rel="stylesheet" href="QString"> to the beginning of the output. This should include and use a named stylesheet. The name may have relative path names, or be an absolute file name. If there are spaces, enclose the name in quotes.

Note: This officially should go into a HEAD section; here it won't be there. Most modern browsers will honor it anyway if it is not honored as a tag, it will not show -- except in the NOTAG option. The file itself is copied from its stated location into the system Temp directory, overwriting any existing file. This file is not erased automatically by this stage.

QString: It is optional to enclose the name in quotes, but quotes are required if the name includes spaces.
- FILETYPE may be used to change the default "html". This permits use of other types that MAY be preprocessed if the system, external to Pipelines, is set up to recognize it, for example, "JSP" or "PHP". A "dot" is optional; only one will be used.

Note: filetypes other than .html may be handled by the system by some program other than the browser.

QString: It is optional to enclose the type in quotes.
- FILENAME may be used to write and display another file. It may include a path designation, either absolute or relative. The relative path is based on the working directory. If no path is specified in the name, the system Temp directory, as defined by Java, is used.

QString: It is optional to enclose the name in quotes, but quotes are required if the name includes spaces.
- Records from the primary input stream are also put out on the primary output stream unchanged, if it is connected.

Passing a non rexx stem object will cause the stage to exit with return code 13. Pipes for NetRexx only.

grep
regex
3.09

Select Lines by a Regular Expression

NetRexx

```
►►---+--GREP---++-----+--regex_Dstring- (1)---►►
    +-REGEX--+  +-|--| options_string |--)-+
options_string:
    +-----+
|---+-----+---+---+
    +-Numbers-----+ (2)
    +-Before-+1-----+ (3)
    |      +-number-+
    +-After-+1-----+ (3)
    |      +-number-+
    +-Context-+1-----+ (4)
    |      +-number-+
    +-NOSeparator-----+ (5)
    +-Separator-+/-/-+ (5)
    |      +-delimitedString-+
    +-Tertiary-----+ (6)
    +-COUnt-----+ (7)
```

- NetRexx Pipelines only.
- Records matching the RegEx are put out on primary output.
- Records not matching are put out on secondary, if connected, or discarded.
- .
- (1) Regex_string is a Java RegEx expresion. Null string passes all records.
- (2) Records are prefaced with records number, 10 characters, right justified.
- (3) Number of records put out after a matching record.
- (4) Number of records put out before and after a matching record.
- (5) Inserted before a group of "before records" or the found record with "after records."
- (6) Send all matching records (no numbers) to tertiary output stream, if connected.
- (7) Only a count of matches is put out on the primary output stream. (Other options probably should not be used with this command.)

hfsdirectory

Read Contents of a Directory in a Hierarchical File System

- Not implemented in Netrexx Pipelines.

hfsquery	Write Information Obtained from OpenExtensions into the Pipeline <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hfsreplace	Replace the Contents of a File in the Hierarchical File System <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hfsstate	Obtain Information about Files in the Hierarchical File System <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hfsxecute	Issue OpenExtensions Requests <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hlasm	Interface to High Level Assembler <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hlasmerr	Extract Assembler Error Messages from the SYSADATA File <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
hole	Destroy Data <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>►---HOLE---</p> </div>
hostbyaddr 3.09	Resolve IP Address into Domain and Host Name <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>►---HOSTBYADDR ---+-----+-----+ +---INCLUDEIP---+ (1)</p> </div> <ul style="list-style-type: none"> (1) Optional parameter not present in VM/CMS version INCLUDEIP - Also include the IP address along with the hostname. Output: <hostname>/<ip address> Example: dns.google/8.8.8.8 Known issues: The underlying Java method getByName/getHostName does not appear to handle IPv6 addresses in a known and consistent manner. Could be related to a host configuration issue but googling shows odd and inconsistent results for getting around this.
hostbyname 3.09	Resolve a Domain Name into an IP Address <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>►---HOSTBYNAME ---+-----+-----+ +---INCLUDENAME---+ (1)</p> </div> <ul style="list-style-type: none"> (1) Optional parameter not present in CMS Pipelines Arguments: INCLUDENAME - Also include the name of the host on output. Output: <hostname>/<ip address> Example: dns.google/8.8.8.8
hostid 3.09	Write TCP/IP Default IP Address <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>►---HOSTID---+-----+-----+ +---USERid--word--(1)--+</p> </div> <ul style="list-style-type: none"> (1) The USERid option available under CMS Pipelines is not applicable and is ignored in NetRexx Pipelines
hostname 3.09	Write TCP/IP Host Name <div style="border: 1px solid black; padding: 5px; width: fit-content;"> <p>►---HOSTNAME---+-----+-----+-----+ +---INCLUDEIP--(1)--+ +---USERid--word--(2)--+</p> </div> <ul style="list-style-type: none"> (1) Optional parameter not present in VM/CMS version (2) The USERid option available under CMS is not applicable and is ignored in NetRexx Pipelines Arguments: INCLUDEIP - include the IP address of the system in the response in the form <hostname>/<ip address>

htmlrows
htmlrow
3.11

Convert rows to HTML format

NetRexx

```
+--SEParator ","-----+
►---HTMLROWS---+-----+-----+-----+-----+
    +-ROW-QString-+ +-SEParator-QString-+
    +-----+-----+-----+-----+
    +-HEAD-QString-+ +-DATA-QString-+
```

- HTMLROWS reads rows from its primary input stream and writes them to its primary output stream, altering them to proper HTML tags for TABLE ROWS.
- I.e., it converts
abc,mnop,xyz
into
<tr><td>abc</td><td>mnop</td><td>xyz</td></tr>
- The SEPARATOR QStirng, by default the comma character, can be specified.
- There are options to put additional data inside the tags. This could be used for class or style tag options, for example
 - ROW QString : puts its information into the <tr>-tags
 - DATA QString : puts its information into the <td>-tags
 - HEAD QString : puts its information into the <th>-tags (1)
- QString is a quoted string of characters. The quote marks may be either single or double, but must match. If there are spaces in the string, the quote marks are optional.
- (1) If there is a HEAD option, the first row read has <th>-tags instead of <td>-tags. It must have a QString of at least one character. Succeeding rows have the standard <td>-tags.

httpsplit

Split HTTP Data Stream

- Not implemented in Netrexx Pipelines.

iebcopy

Process IEBCOPY Data Format

- Not implemented in Netrexx Pipelines.

if

Process Records Conditionally

- Not implemented in Netrexx Pipelines.

immcmd

Write the Argument String from Immediate Commands

- Not implemented in Netrexx Pipelines.

insert

Insert String in Records

```
+--BEFORE--+
►---INSERT--delimitedString--+-----+-----+-----+-----+
    +-AFTER--+ +inputRange--+
```

- insert a string into a record before or after the record content. Will be much more efficient than specs especially if the input is a Byte[]

inside

Select Records between Labels

```
►---INSIDE---+-----+---delimitedString--+---number-----+-----+
    +-ANYcase----+
    +-CASEANY----+
    +-CASEIGNORE--+
    +-IGNORECASE--+
    +-CASELESS----+
```

instore

Load the File into a storage Buffer

<code>parse 3.09</code>	Rearrange Contents of Records <p>NetRexx</p> <pre> ▶---PARSE--<u>parse_template_Dstring</u>--<u>output_template_Dstring</u>--▶ </pre> <ul style="list-style-type: none"> • Records are parsed via the <code>parse_template_delimited_string</code>. • Variables are named \$n, where n is 1 to 9. • The values of the variables are put into the <code>output_template_delimited_string</code> replacing \$n. • For a literal \$n that won't be changed, use \$\$n. • NetRexx Pipelines only. • . • Example: <code>parse / 2 \$1 +1/ /The second letter is "\$1". \$\$1 won't be changed./</code>
<code>pause</code>	Signal a Pause Event
<code>pdsdirect</code>	Write Directory Information from a CMS Simulated Partitioned Data Set

pick

Select Lines that Satisfy a Relation

NetRexx

```
+--NOPAD----+
►►--PICK--+-----+-----+--►
    +-PAD-xorc-+ +-ANYcase-(1)+ 
        +-CASEANY----+
        +-CASEIGNORE--+
        +-CASELESS----+
        +-IGNORECASE--+
    +--+-----+--+---+-----+--►
    +-inputRange-+ +-^---+ +-inputRange-----+
        +-<<---+ +-delimitedString-+
        +-<<---+
        +->>---+
        +->>---+
        +-\'---+(2)
        +-/----+
        +-=---+
        +-^---+
        +-<---+
        +-<---+
        +->---+
        +->---+
        +-\'---+(2)
        +-/----+
```

- (1) Can be before PAD/NOPAD. Deprecated.
- (2) The backslash (\) may need to be escaped, doubled, in some systems shells.

pick

Select Lines that Satisfy a Relation

pickparse
3.09

Select Lines that Satisfy Relations using RerrMsg Parse

NetRerrMsg

```
+--ONE-----+          +-- (2) -----+
►►---PICKPARSE---+-----+--parse_Dstring-----+-----+---+---►►
+--ALL---+-----+---+           +--logic_Dstring---+
+--SINGLE---+           +--ELSE- (1) -----+
```

- Records are parsed via the parse_delimited_string.
- Variables are named \$n, where n is 1 to 9.
- The values of the variables are put into the logic_delimited_string replacing \$n and evaluated. If TRUE, the record is on the stream numbered by the dstring's position.
- The stream for a Dstring of ELSE is used if no previous logic Dstring is TRUE.
- If there is no specific ELSE, there is an implied one at the end; if that stream is not connected, the record is discarded.
- If ONE then the record is put out on, at most, one stream: the first one matched.
- If ALL then the record is put out on all streams matched.
- If SINGLE then the records are all put out on the primary output stream.
- The parse_delimited_string and logic_delimited_string(s) follow normal NetRerrMsg rules.
- (1) Implied ELSE after last specified dstring.
- (2) Up to 10 logic_Dstrings may be specified to go to up to 11 ouput streams (including an implied ELSE).
- Not implemented in CMS Pipelines.

Pickparse permits selecting records by a NetRerrMsg logical expression, using parts of the record selected by a Rexx PAF template.

A simple example has two delimited strings, a Rexx template and a logical expression:

```
pickparse / . . $3 . 50 $5 +5 / / $3 < $5 /
```

The parse template selects the 3rd word, and the 5 characters starting in column 50. the variable names are a dollar sign digit. Then those variables can be used in the logic expression. When run, and records matching the logic expression are to the primary output stream, others to the secondary. If either stream is not connected, the corresponding records are discarded.

There can be multiple logic expressions, each in its own delimited string. Parenthetical expressions may be used. Records matched to each in turn. Any records matching are written to that output stream, if connected.

With the option ONE, the default, each record is written to one output stream: the first one it matches. With the option ALL matching goes on and a record could be written to multiple output streams.

There is an implicit or explicit ELSE as the last logic expression. Records that have not matched any of the previous expressions match this and are written or discarded depending on if the stream is connected or not.

The parse template can define up to 9 separate zones, \$1 to \$9. The variables \$_n are also available for the logic expression they are the values from the previous record. Initially these are "".

There can be up to 10 output streams defined, and up to 9 logic expressions plus ELSE.

pipcmd

Issue Pipeline Commands

- Not implemented in Netrexx Pipelines.

pipestop

Terminate Stages Waiting for an External Event

- Not implemented in Netrexx Pipelines.

polish

Reverse Polish Expression Parser

- Not implemented in Netrexx Pipelines.

predselect

Control Destructive Test of Records

- Not implemented in Netrexx Pipelines.

preface

Put Output from a Device Driver before Data on the Primary Input Stream

- Not implemented in Netrexx Pipelines.

prefix	Stop and Run a Stage First, Before Continuing
	<p>NetRexx</p> <pre>►►--PREFIX---string-----►►</pre> <ul style="list-style-type: none"> Blocks its primary input and executes stage supplied as an argument. The output from this stage are put to the primary stream. When its complete the primary input is shorted. Not implemented in CMS Pipelines.

  +-NOSeparator-----+ (5)
  +-Separator+-/-/-+---+ (5)
  |      +-delimitedString-+
  +-Tertiary-----+ (6)
  +-COUnt-----+ (7)
```

- NetRexx Pipelines only.
- Records matching the RegEx are put out on primary output.
- Records not matching are put out on secondary, if connected, or discarded.
- .
- (1) Regex_string is a Java RegEx expresion. Null string passes all records.
- (2) Records are prefaced with records number, 10 characters, right justified.
- (3) Number of records put out after a matching record.
- (4) Number of records put out before and after a matching record.
- (5) Inserted before a group of "before records" or the found record with "after records."
- (6) Send all matching records (no numbers) to tertiary output stream, if connected.
- (7) Only a count of matches is put out on the primary output stream. (Other options probably should not be used with this command.)

retab

Replace Runs of Blanks with Tabulate Characters

- Not implemented in Netrexx Pipelines.

reverse

Reverse Contents of Records

```
►►---REVERSE-----►►
```

rex

Run a REXX Program to Process Data

- Not implemented in Netrexx Pipelines.

rexvars

Retrieve Variables from a REXX or CLIST Variable Pool

- Not implemented in Netrexx Pipelines.

runpipe

Issue Pipelines, Intercepting Messages

- Not implemented in Netrexx Pipelines.

scm

Align REXX Comments

- Not implemented in Netrexx Pipelines.

sec2greg

Convert Seconds Since Epoch to Gregorian Timestamp

- Not implemented in Netrexx Pipelines.

serialize

Convert Objects to a Single Text String

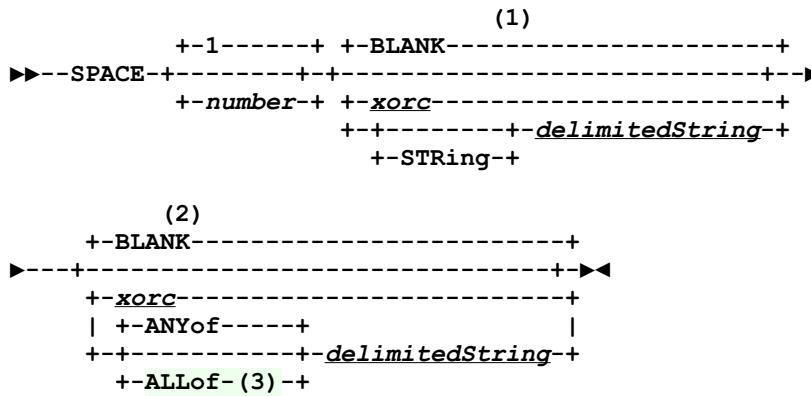

NetRexx

```
limited information available
```

- {class} if class is specified deserialize input to objects of this type otherwise serialize input objects.
- Pipes for NetRexx only.
- For some reason readObject does not like more than one object network in its stream. Block multiple objects. see examples/sertest.njp

space
3.09

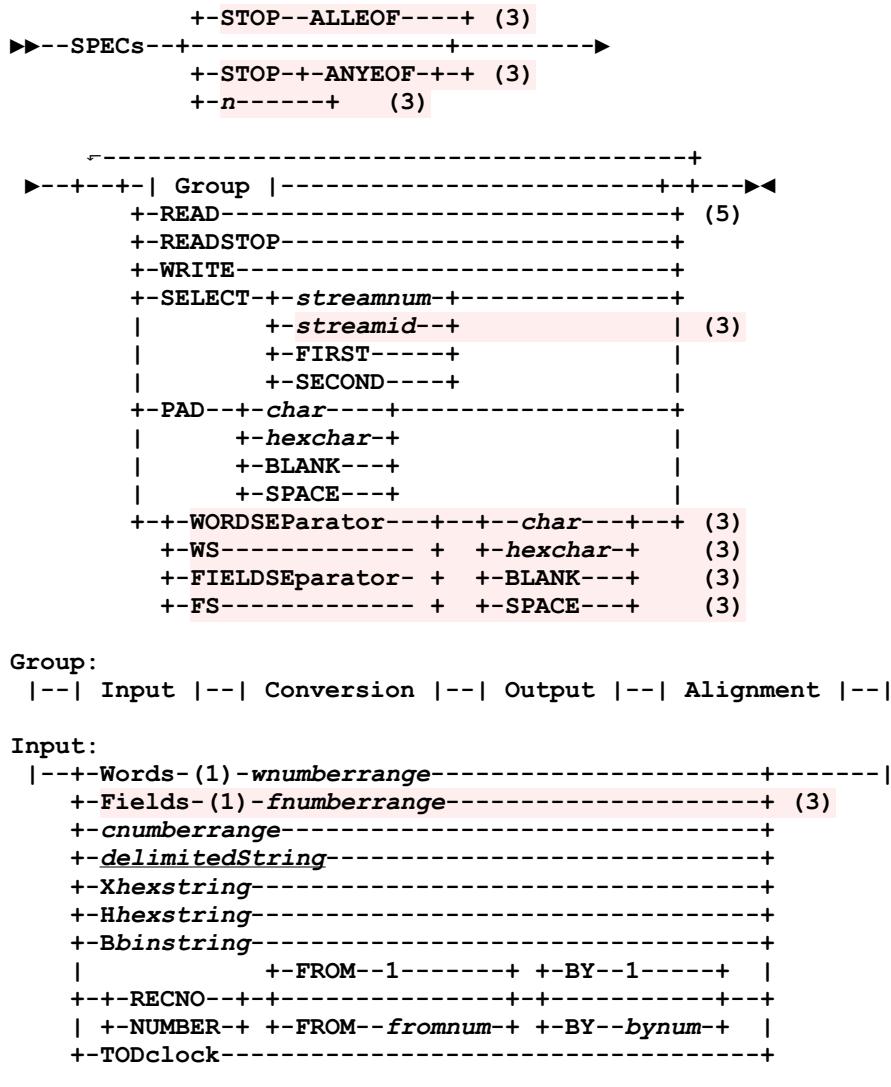

Space Words Like REXX

- (0) The order is the reverse of CHANGE!
 - (1) the replacement char/string
 - (2) the char/chars that will be stripped and replaced
 - (3) NetRexx Pipelines only, not CMS. The dstring is treated as a single unit for stripping or replacing

+-USER-Qword-(5)(7)(8)(10)-----+ |  
+-PASS-Qword-(5)(7)(8)(10)-----+ |
```

- uses jdbc to select from any jdbc enabled dbms
 - properties file (sqlselect.properties default) is read from the secondary input stream to find jdbcdriver name, url, user, password
 - sample properties file:

```
#JDBC driver name
#Tue Feb 03 23:29:43 GMT+01:00 1998
jdbcdriver=com.imaginary.sql.msql.MsqlDriver
url=jdbc:mysql://localhost:1114/TESTDB
# the following are not needed for some DBMS, ex: SQLite
user=db_user_name
pass=password_for_db
```
 - if this file is not found default (compiled in) values are used
 - (1) when using a sql select * (all columns) from the commandline, quote the query as in
`java pipes.compiler (query) "sql select * from dept | console"`
 - (2) the netrexx/jdbc combination is extremely case sensitive for column and table names
 - (3) this sql_select_string executed, then statements are read from the primary input stream.
this is optional in NetRexx Pipelines only.
 - (4) CMS does not use the stream input
 - (5) NetRexx Pipelines only
 - (6) CMS Pipelines is implied HEADERS only.
 - (7) A Qword is an optionally quoted word. If it contains spaces, it must be quoted.
 - (8) EXPERIMENTAL Subject to change. DBMS is the kind of database, e.g. SQLite. DB_name is the file name. The used in place of URL and JDBC_DRIVER. SQLite is the only one tested as of 8/15/20.
 - (9) the SQLSELECT stage uses HEADERS as the default.
 - (10) USER & PASS are needed for some DBMSs and not others, ex. SQLite.
 - (11) the count or other output from non-select statements goes to the secondary output stream if connected, or is discarded. Otherwise it goes to the primary.
 - Priority order for URL, JDBC_DRIVER and DBMS, DB_NAME (first one found rules):
 1. option in the SQL command string
 2. from secondary input stream
 3. from "sql.properties" file or from file specified by PROPERTIES option
 4. Built-in

sqlcodes

Write the last 11 SQL Codes Received

- Not implemented in Netrexx Pipelines.

trackread	Read Full Tracks from ECKD Device <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
tracksquish	Squish Tracks <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
trackverify	Verify Track Format <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
trackwrite	Write Full Tracks to ECKD Device <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
trackxpand	Unsquish Tracks <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
translate translat translate transl trans xlate	Transliterate Contents of Records <pre>>>---+--TRANSlate---+-----+-----+--> +-XLATE-----+ +-<u>inputRange</u>-----+ +- default-table - -----+ +--+ (--<u>inputRange</u>--)-+--+ -----+ >-+-----+-----+-----> +-xrange--xrange--+ default-table: ---UPper-----+----- +-LOWER-----+ +-INPUT-----+ { +-OUTput-----+ } { +-+-TO-----+-----+--n--+ } { +-FROM--+ +-CODEPAGE--+ } { } { Not yet in Pipes for NetRexx }</pre>
trhread	Read a Trace File <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
truncate truncat trunca trunc chop	Truncate the Record <pre>+--80-----+ >>---+--TRUNCate---+-----+-----+--> +-CHOP-----+ +-snumber-----+ +- stringtarget --+ stringtarget: ---+-----+-----+-----+-----+-----+ target -- +-ANYcase-----+ +-BEFORE--+ +-NOT--+ +-CASEANY-----+ +-+-----+-----+-----+-----+ +-CASEIGNORE--+ +-snumber-+ +-AFTER--+ +-IGNORECASE--+ +-CASELESS----+ target: ---+-xrange-----+-- +-+--STRing---+-<u>delimitedString</u>-+ +-ANYof--+</pre>

tso	Issue TSO Commands, Write Response to Pipeline <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
udp	Read and Write an UDP Port <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
unique uniqu uniq	Discard or Retain Duplicate Lines <pre> +--NOPAD-----+ >>--UNIQue--+-----+-----+-----+-----+-----+-----+-----+-----+ +--COUNT--+ +--PAD--xorc--+ +--ANYcase-----+ +--CASEANY-----+ +--CASEIGNORE--+ +--IGNORECASE--+ +--CASELESS-----+ +--LAST-----+ >>-----+-----+-----+-----+-----+-----+-----+-----+-----+ +-- uniqueRanges --+ +--SINGLeS-----+ +--FIRST-----+ +--MULTiple--+- +--PAIRwise--+- uniqueRanges: ---+--inputRange-----+--- -----+-----+-----+-----+-----+-----+-----+-----+-----+----- +-- (---+--inputRange--+-----+-----+-----+-----+-----+-----+-----+-----+-----) +--NOPAD-----+ +--PAD--xorc--+- </pre>
unpack	Unpack a Packed File <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
untab	Replace Tabulate Characters with Blanks <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
update	Apply an Update File <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
urldeblock	Process Universal Resource Locator <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
uro	Write Unit Record Output <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
utf	Convert between UTF-8, UTF-16, and UTF-32 <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
var	Retrieve or Set a Variable in a REXX or CLIST Variable Pool <pre> >>--VAR--variable-----+-----+-----+-----+-----+-----+-----+-----+-----+-----+ </pre> <ul style="list-style-type: none"> Pipes for NetRexx: this can only read vars
vardrop	Drop Variables in a REXX Variable Pool <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
varfetch	Fetch Variables in a REXX or CLIST Variable Pool <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.

varload	Set Variables in a REXX or CLIST Variable Pool <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
varover 3.09	Write the Values of Stems <p>NetRexx</p> <pre>►--VAROVER--varName---►</pre> <ul style="list-style-type: none"> NetRexx Pipelines only; not CMS Pipelines
varset	Set Variables in a REXX or CLIST Variable Pool <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
vchar	Recode Characters to Different Length <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
vector	Read or Write an Array of Vectors <ul style="list-style-type: none"> Pipes for NetRexx only.
vectora	Add to an Array of Vectors <ul style="list-style-type: none"> Pipes for NetRexx only.
vectorr	Read From an Array of Vectors <ul style="list-style-type: none"> Pipes for NetRexx only.
vectorw	Write to an Array of Vectors <ul style="list-style-type: none"> Pipes for NetRexx only.
verify 3.09	Verify that Record Contains only Specified Characters <pre>-----+ (1) ►--VERIFY--+-----+-----+--+--delimitedString--+--► +-ANYCASE----+ +-inputRange-+ +-character-range-+ (1) +-CASEANY----+ +-CASEIGNORE--+ +-IGNORECASE--+ +-CASELESS----+</pre> <ul style="list-style-type: none"> (1) NetRexx Pipelines only (1) Examples: A-Z 0-9 c-g a4-ba; 16-bit Unicode characters or hex numbers (1) Any number greater than zero, any order, of delimitedStrings and character-ranges are allowed.
vmc	Write VMCF Reply <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
vmcdatal	Receive, Reply, or Reject a Send or Send/receive Request <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
vmclient	Send VMCF Requests <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
vmclistens	Listen for VMCF Requests <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
waitdev	Wait for an Interrupt from a Device <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.

warp	Pipeline Wormhole <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
warplist	List Wormholes <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
whilelabel 3.09	Select Run of Records with Leading String <pre>>>--WHILELABEL-----+---+--> +--string--+</pre>
wildcard	Select Records Matching a Pattern <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
writepds	Store Members into a Partitioned Data Set <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
xab	Read or Write External Attribute Buffers <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
xedit	Read or Write a File in the XEDIT Ring <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
xlate translate translat transla transl trans	Transliterate Contents of Records <pre>>>--+--XLATE-----+---+-----+--+-----+--+ +-+TRANSLate--+ +-+<u>inputRange</u>-----+ + - default-table +-+ +-----+ +---+(-<u>inputRange</u>--)-+---+ +-----+ >-+---+-----+---+--> +-+<u>xrange</u>--<u>xrange</u>--+</pre> <p>default-table:</p> <pre> ---+--UPper-----+-----+ +-+LOWER-----+ +-+INPUT-----+ { +-+OUTput-----+ } { +-+TO-----+---+--n---+ } { +-+FROM--+ +-+CODEPAGE--+ } { } { Not yet in Pipes for NetRexx }</pre>
xmsg	Issue XEDIT Messages <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.
xpndhi	Expand Highlighting to Space between Words <ul style="list-style-type: none"> Not implemented in Netrexx Pipelines.

xrange
3.09

Write a Range of Characters

```
▶▶---X RANGE---+-----+-----▶◀  
    +-xrange-----|  
    +-xorc--xorc-+
```

- NetRexx uses UTF-16 (ASCII) and CMS uses EBCDIC

zone

Run Selection Stage on Subset of Input Record

```
▶▶---ZONE---+-----+-----+  
    +-+---WORDSEPARATOR---+---+---char---+---+  
        +-WS-----+      +-hexchar---+  
        +-FIELDSEPARATOR---+      +-BLANK---+  
        +-FS-----+      +-SPACE---+  
  
▶---+---Words---wNumberRange---+-----+  
    +-Fields---fNumberRange---+  
    +-cNumberRange---+  
  
▶---+-----+-----+-----+---stage---+-----+-----+  
    +-CASEI---+      +-REVERSE---+      +-operands---+
```
